PROFILE

Security researcher and operations professional seeking a structured SOC/cybersecurity apprenticeship. I review unfamiliar code and systems, identify affected paths, reproduce issues safely, document evidence clearly, and communicate root cause and practical fix direction. Background combines independent vulnerability research with store-level operations, incident judgment, shift discipline, and team accountability.

SECURITY RESEARCH HIGHLIGHTS

- 55 externally validated vulnerability findings across AI/agent tooling, MCP, Web3, OSS, developer tooling, and cloud-adjacent ecosystems, including Critical and High-severity reports.
- Ranked #337 on the Microsoft Security Response Center 2026 Q2 Points Leaderboard.
- AWS Security confirmed six implemented awslabs/mcp security fixes across likely exploitable paths, including SQL execution bypass, sensitive-data exposure, auth-header logging, Kubernetes apply bypass, resource mutation bypass, and arbitrary file write.
- Public large-repo proof: Google PR #3219 fixed a BigQuery ML allowlist bypass I reported.
- IBM MCP Context Forge added public regression tests for my Critical RestrictedPython sandbox escape.
- Additional public advisory or maintainer credits include CamoFox, Auth Fetch, MCP Registry, Repomix, and OpenClaw issue #72574 / PR #87375.

RELEVANT SKILLS

SOC and analyst fit: security monitoring mindset, vulnerability triage, evidence capture, incident documentation, false-positive analysis, escalation-ready reporting, remediation tracking, attention to detail.

Security topics: access control, authN/authZ, SSRF, injection, sandbox escape, unsafe execution, file/path traversal, sensitive-data exposure, weak defaults, OWASP Top 10, CVSS-style severity reasoning.

Technical tools: Linux, Windows fundamentals, networking fundamentals, Python, Bash, SQL, JavaScript/TypeScript, curl, gh CLI, GitHub Security Advisory/PVR workflows, Docker, Kubernetes, Burp Suite basics.

AI and automation: MCP/custom tools, local sandboxing, browser automation, transcript/evidence capture, review-gated automation.

EXPERIENCE

Independent Security Researcher

Application security, AI/MCP tooling, responsible disclosure

2026 – Present

Philadelphia, PA

- Reviewed unfamiliar codebases from entry point to trust boundary and tied missing checks to concrete user, system, or data impact.
- Built non-destructive proof-of-concept harnesses around mocked services, negative controls, and patch-state checks so maintainers could validate impact safely.
- Standardized vulnerability triage so duplicates and weak findings were killed before external disclosure.
- Wrote reports that separated affected component, preconditions, reproduction steps, observed result, expected result, impact, and suggested fix direction.
- Worked through real security-team and maintainer conversations with AWS Security, Microsoft Security Response Center, IBM/open-source maintainers, GitHub PVR maintainers, and Web3 bounty programs.

Operations Management – Albertsons / Acme Markets

Department Manager & Person-in-Charge

Nov 2022 – Present

Philadelphia, PA

- Advanced into storewide person-in-charge coverage across employees, customers, safety, replenishment, service recovery, and urgent operating issues.

- Used operating reports, P&L signals, purchasing/receiving data, and floor-level observation to identify recurring waste and shrink problems; reduced shrink by 12%.
- Trained and onboarded 30+ employees while keeping daily execution stable in a high-volume retail environment.
- Built practical incident judgment by handling staffing gaps, replenishment failures, customer issues, vendor timing, compliance needs, and service recovery under time pressure.

Founder & Technical Lead – DreamSiteBuilders / TurfRank

Customer-facing systems and applied AI workflows

2025 – Present

Philadelphia, PA

- Shipped 15+ production websites and customer-facing systems for local businesses, translating vague requests into live pages, reports, demos, and handoff artifacts.
- Built TurfRank as an audit API/product that returns review, search, trust, lead, and conversion checks in a single business report.
- Built internal AI workflows for research, drafting, implementation, QA, reporting, and customer handoff, with human review gates for external actions.

EDUCATION

Rowan University – B.A. Economics, 2023. Founded Blockchain Studies Club and led sessions on Bitcoin, Ethereum, mining, consensus, and practical blockchain applications. Model United Nations, Honorable Delegate, 2022.
